

# Aqua Mist Misters

## Low Pressure PVC Misting Systems

- Attach to any standard garden hose
- Ideal for patio mist cooling, dust control, odor control, and other misting applications
- Pre-cut PVC piping spaces misting nozzles apart every 18", the preferred distance for mist cooling
- Includes all the hard to find PVC fittings including PVC Misting Tees
- Mounting Clamps mount in place permanently but the misting system can be un-snapped from the clamps in seconds for storage, if needed
- Made from Schedule 40 PVC fittings for durability
- Corrosion resistant plastic misting nozzles with built-in mesh screen filters to prevent clogging
- Available in 10', 25', and 50' lengths. Kits can be combined to make longer misting systems.

Our Low Pressure PVC Misting Systems are ideal for a wide variety of misting applications. Typical uses include: patio mist cooling, dust control, odor control, and other unique misting applications. These PVC Misting Systems attach to any garden hose to operate off of standard city or well water pressure with no special pumps required.

Low Pressure PVC Misting Systems from Aqua Mist are sold in 10', 25', and 50' kits. These kits can be combined to form longer lengths if needed. The pre-cut PVC piping spaces the misting nozzles apart every 18", which is the recommended spacing for mist cooling applications. The plastic nozzles are chemical and corrosion resistant and will actually outlast brass misting nozzles. A built-in stainless steel mesh screen filter on each nozzle prevents nozzle clogging and damage which is common with inferior misting nozzles.
